GEAR LIFT

(up to 2000 kg)

Way more powerful than the 1000 Kg LIFT, this equipment can rely on a very solid and tough structure that assure great precision and reliability even when picking up heavy and unwieldy loads.

LS LIFTING STROKE (MM)	Q LOAD (KG)	L LENGTH (MM)	LP MIN HEIGHT (MM)	UP MAX HEIGHT (MM)
80	500	2000	230	310
	1000	1800		
	1500	1600		
	2000	1400		
90	500	2000	225	315
	1000	1800		
	1500	1600		
	2000	1400		
100	500	2000	220	320
	1000	1800		
	1500	1600		
	2000	1400		
120	500	2000	210	330
	1000	1800		
	1500	1600		
	2000	1400		

Designed on the basis of highly precise mechanical parameters, this LIFT allows operating with very small tolerances on a remarkably long lifetime. Just like the 1000 Kg GEAR LIFT, this equipment is operated through eccentric cams that are runned by an induction-hardened gear train.

The 2000 Kg GEAR LIFT is particularly fit for applications where high efficiency in work cycles, high repeatability and great precision by picking and dropping are required.
